City of San Jose to host **Renewable Energy From Waste Conference 2014**

November 18-20, 2014, Double Tree by Hilton, San Jose, California

Recycling Today Media Group together with Smithers Apex are pleased to announce the dates for the second **Renewable Energy From Waste Conference**, to be hosted by the City of San Jose from November 18-20, 2014 at the Hilton by Doubletree, San Jose, California. Following the overwhelming success of the 2013 event, Renewable Energy From Waste has become firmly established as the premier event for the rapidly developing and dynamic waste energy industry.

Whilst demand for energy and building block chemicals continues to rise, we are also facing unprecedented levels of natural resource scarcity and cost. As a result, capturing the resource potential of waste streams is gaining accelerated importance and fuelling an industry with incredible growth potential. This growth is facilitated by renewable energy policy, increased funding availability, revenue potential, and landfill policy alongside associated costs.

The **Renewable Energy From Waste Conference** brings together those operating in a wide range of technologies, including gasification, anaerobic digestion, refuse-derived fuel, plastics to oil and end-user applications to discuss everything from the economics of waste conversion to lessons learned to the legislative outlook for conversion technologies. This **diverse programme** is augmented by tours of **San Jose’s world-class waste processing facilities**, as The Newby Island Resource Recovery Park and Zero Waste Energy Development Company (ZWEDC) open their doors to delegates of the Renewable Energy From Waste Conference this Fall.

The conference attracts waste generators, the government sector, waste management firms, recycling firms, energy and chemical producers and equipment and technology suppliers for insights into financials, market trends and opportunities, and technology developments. Jim Keefe of Recycling Today Media Group said “The forthcoming conference will equip organisations with the contacts, information and strategies so that you can capitalize on this rapidly growing market”.
